MARKETING NEW YORK'S FINGER LAKES DISTRICT GRAPES

BRIEF REVIEW OF THE 1941 SEASON

Daily market reports on grapes were issued from the Federal-State Market News office in Rochester, New York from September 23, 1941 to October 6, 1941. The reports were mailed free of charge to interested parties requesting them. The material contained in this brief review has been obtained from the daily reports issued at Rochester, from Departmental publications released at Washington, D.C. or Albany, N.Y., and from growers and shippers in the Finger Lakes District of New York.

New York State's 56,800 ton grape crop for 1941 was about 25 percent less than the 1940 crop of 75,800 tons and was about an equal percent smaller than the 1930-1939 average of 74,750 tons. The production of 137,200 tons for 1941 in the four major Eastern grape producing states (New York, Pennsylvania, Ohio and Michigan) was 28 percent less than the 1940 crop and was about 25 percent below the 1930-1939 average. In spite of the comparatively small production in these Eastern States, the United States total grape production (2,651,430 tons) was slightly larger than the 1940 crop and was larger than average. California, which produces more than 90 percent of the country's grape crop, produced a larger than usual crop and it's increase offset the decrease in production in the Eastern States.

Western New York grape districts experienced a warm, early spring in 1941 and the dormant period of the grape vines was broken two to three weeks earlier than in 1940, and earlier than average. The crop progressed and matured correspondingly early. Growers commenced harvesting the important Concord crop around September 22 and finished during the first week in October. By way of contrast, the harvest in 1940 did not get under way until the first week in October. Weather conditions were unusually favorable for the 1941 harvest, which was completed without any losses from freezes. A strong wind occurred at the finish but little damage was reported as most grapes were harvested.

Rail shipments of fresh grapes reached a new low, with a total of 4 cars shipped from loading stations within the State. This compares with 17 cars in 1940 and 71 cars in 1939. During the seasons 1934-1938 shipments ranged from 150 to 750 cars, but prior to 1934 shipments exceeded 1,000 cars annually. A peak of 7,242 cars was shipped in 1926.

No accurate data are available concerning the volume of movement by trucks to terminal markets, however various estimates place it at less than 5 percent of the production for 1941. The movement by trucks was lighter in 1941 than in 1940 according to these estimates. A small percent of the crop, as in recent years, was disposed of at roadside stands. Processing plants located in the Grape Belt, which have been taking more and more of the production each season, absorbed the bulk of the crop.

Shipping point prices during the 1941 season were considerably higher than for 1940. Two-quart Climax baskets of U.S.No.1 Table Concords ranged 14½-16¢ in 1941, 10½-12¢ in 1940. Bushel baskets of U.S.No.1 Juice Concords ranged \$55.00-60.00 per ton in 1941, 29.00-43.00 in 1940. Bushel baskets of U.S.No.1 Juice Niagaras sold at \$58.00-65.00 in 1941, \$36.00-40.00 in 1940, per ton.

The demand for grapes by processors (Juice, Wine, Jelly, Etc.) located in the Grape Belt of central and western New York was very active and most of the crop was contracted at the seasons start by them. Preseason contract prices to growers in the Finger Lakes District were reported to have been around \$50.00 per ton for Concords, \$150.00 per ton for Delawares, \$60.00 per ton for Niagaras, and \$100.00 per ton for Catawbases. Prices paid by processors in 1940 were around \$30.00 per ton for Concords, \$110.00 per ton for Delawares, \$40.00 per ton for Niagaras, and \$65.00 per ton for Catawbases.

Total returns to western and central New York grape growers for the 1941 crop were larger than for 1940 as higher prices more than offset the reduction in production.
